

Best Practices - Databases

“Delivering Value Series”

Come enjoy breakfast and conversation with some of the industry's top Oracle and SQL database experts!

They'll share Best Practices, Hints & Tips, and Customer Stories.

With clients of every size, industry, and need, they have experienced many interesting and unusual situations when it comes to databases.

“It is one thing to talk of best practices, but another when the conversation is based on our actual adventures in the jungles known as Oracle and SQL Server. We will share our experiences, knowledge and wisdom so that you can apply it in the real world – your world.”

Learn to avoid the mistakes they've made and apply the lessons they've learned regarding performance, availability, backups, upgrades, migrations and more.

This will be an OPEN FORUM presentation, aimed at lively audience participation. Please prepared with your questions and don't be shy to ask!
